Barclays issues further investor guidance on GAZ ETNs

New York, December 8, 2017 – Barclays Bank PLC (“Barclays”) announced an investor guidance notification today regarding the iPath® Bloomberg Natural Gas Subindex Total Return℠ Exchange Traded Notes (the “ETNs”). The ETNs are listed on the NYSE Arca exchange (the “Exchange”) under the ticker symbol “GAZ” and are linked to the performance of the Bloomberg Natural Gas Subindex Total Return℠ (the “Index”). This investor guidance notification follows one announced by Barclays on March 8, 2017 regarding the decline in the daily redemption value of the ETNs.

The daily redemption value of the ETNs on December 7, 2017 hit an all-time low of $0.062 per ETN. At the current time, the daily redemption value of the ETNs would drop to $0 if the Index decreases by another 6.83% from the Index closing level on December 7, 2017. Additionally, as accrued investor fees in the ETNs grow over time regardless of the performance of the Index, the magnitude of the decrease in the level of the Index required for the daily redemption value of the ETNs to drop to $0 will also reduce progressively.

The Index has experienced another sharp decline since November 10, 2017, with the level of the Index decreasing approximately 16% in 27 calendar days, in addition to the persistent decline experienced during recent years. Continued weakness in the Henry Hub Natural Gas futures markets may result in a significant decline in the level of the Index in the months ahead, which in turn may result in the daily redemption value of the ETNs continuing to decline significantly and potentially to $0.

The listing rules of the Exchange provide that the ETNs may be subject to delisting from the Exchange if the aggregate market value or the principal amount of the ETNs publicly held is less than $400,000. If the ETNs are delisted from the Exchange, the secondary market for the ETNs may experience a significant drop in liquidity, and holders of the ETNs may not be able to trade or sell their ETNs easily.

Recently, a material premium has also developed in the trading price of the ETNs on the exchange in relation to their intraday indicative value. From January 3, 2017 to December 7, 2017, the closing indicative value (also referred to as the daily redemption value) decreased by approximately 88% from $0.52 to $0.062 per ETN, while the closing price of the ETNs on the Exchange decreased by only approximately 55% from $0.59 to $0.267 per ETN. The closing price of the ETNs on the Exchange as of December 7, 2017 reflected a 327% premium to the corresponding closing indicative value.

Because further issuances and sales from inventory of the ETNs remain suspended, there are likely to be continued fluctuations in this premium if strong interest from exchange participants in purchasing the ETNs continues.
For immediate release

Investors should exercise extreme caution before purchasing or selling ETNs at a market price that reflects a premium over the intraday indicative value or daily redemption value, as the case may be. The “intraday indicative value” of the ETNs is intended to provide investors with an approximation of the effect that changes in the level of the Index during the current trading day would have on the daily redemption value of the ETNs from the previous day. The intraday indicative value of the ETNs is calculated and published with a frequency of at least every 15 seconds throughout the trading day, under the ticker symbol GAZ.IV. The “daily redemption value” (or “closing indicative value”) is the closing value of the ETNs calculated by us on a daily basis and is used to determine the payment at maturity or upon early redemption. As a result, if investors purchase the ETNs at a price which reflects a premium over the intraday indicative value or daily redemption value, as the case may be, they may experience a significant loss if they sell the ETNs at a time when such premium is no longer present, if they redeem the ETNs at the daily redemption value or if they hold the ETNs until maturity.

For more information on what a premium in the market prices represents, please refer to the iPath website under “About ETNs”. Investors are also encouraged to refer to the prospectus relating to the ETNs for risk factors relating to the market value of the ETNs, including the risks associated with a premium in market prices on the exchange.

Investors should not assume that the ETNs will continue to trade at a premium in relation to their intraday indicative value or daily redemption value, as the case may be. Any secondary market premium could continue to decrease, even significantly, or cease to exist entirely at any time. Given the market conditions described above, anyone considering investing in the ETNs or continuing to hold the ETNs should consider these risks when making an investment decision and consult with their broker or financial advisor to evaluate their investment in the ETNs.

In addition to the notice on March 8, 2017, Barclays has issued similar investor guidance notices on November 9, 2015 and December 22, 2015 regarding the decline in the daily redemption value of the ETNs and likelihood of premiums and discounts in the secondary market prices to persist.

Barclays has also announced the listing of a new ETN (the “New ETNs”) (Ticker: GAZB) linked to the same Index earlier this year. The New ETNs offer a similar exposure as the existing ETNs (the “Old ETNs”), but will include certain differences, including a reduced investor fee and an issuer redemption feature. Please refer to the associated press release on March 8, 2017 for more details.

Holders of the Old ETNs that wish to sell their Old ETNs and/or purchase New ETNs may take any of the following actions:

1) Sell Old ETNs and/or purchase New ETNs on the secondary market at the prevailing trading price on the exchange;

2) Put Old ETNs to Barclays (including with respect to the valuation date occurring on each Wednesday with reduced minimum early redemption sizes) and simultaneously purchase New ETNs from Barclays in an amount having an equal dollar value, with each transaction having the same valuation date and

Selected Risk Considerations
An investment in the iPath ETNs described herein involves risks. Selected risks are summarized here, but we urge you to read the more detailed explanation of risks described under “Risk Factors” in the applicable prospectus supplement and pricing supplement.

You May Lose Some or All of Your Principal: The ETNs are exposed to any decrease in the level of the underlying index between the inception date and the applicable valuation date. Additionally, if the level of the underlying index is insufficient to offset the negative effect of the investor fee and other applicable costs, you

[Continues with detailed information about the ETNs and their risks]
will lose some or all of your investment at maturity or upon redemption, even if the value of such index has increased. Because the ETNs are subject to an investor fee and any other applicable costs, the return on the ETNs will always be lower than the total return on a direct investment in the index components. The ETNs are riskier than ordinary unsecured debt securities and have no principal protection.

The ETNs offer exposure to futures contracts and not direct exposure to physical commodities: The ETNs offer investors exposure to the price of New York Mercantile Exchange (NYMEX) traded Henry Hub Natural gas futures contracts and not to the spot price of Henry Hub Natural Gas. The price of a commodity futures contract reflects the expected value of the commodity upon delivery in the future, whereas the spot price of a commodity reflects the immediate delivery value of the commodity. A variety of factors can lead to a disparity between the expected future price of a commodity and the spot price at a given point in time, such as the cost of storing the commodity for the term of the futures contract, interest charges to finance the purchase of the commodity and expectations concerning supply and demand for the commodity. The price movement of a futures contract is typically correlated with the movements of the spot price of the reference commodity, but the correlation is generally imperfect and price moves in the spot market may not be reflected in the futures market (and vice versa). Accordingly, the ETNs may underperform a similar investment that reflects the return on the physical commodity.

Credit of Barclays Bank PLC: The ETNs are unsecured debt obligations of the issuer, Barclays Bank PLC, and are not, either directly or indirectly, an obligation of or guaranteed by any third party. Any payment to be made on the ETNs, including any payment at maturity or upon redemption, depends on the ability of Barclays Bank PLC to satisfy its obligations as they come due. As a result, the actual and perceived creditworthiness of Barclays Bank PLC will affect the market value, if any, of the ETNs prior to maturity or redemption. In addition, in the event Barclays Bank PLC were to default on its obligations, you may not receive any amounts owed to you under the terms of the ETNs.

Market and Volatility Risk: The prices of physical commodities, including the commodities underlying the index components, can fluctuate widely due to supply and demand disruptions in major producing or consuming regions. Additionally, the market value of the ETNs may be influenced by many unpredictable factors including changes in supply and demand relationships (including as a result of redemptions of the ETNs and, in the case of the New ETNs, sales from inventory and issuances of New ETNs), governmental policies and economic events.

A Trading Market for the ETNs May Not Develop: Although the ETNs are listed on NYSE Arca, a trading market for the ETNs may not develop and the liquidity of the ETNs may be limited, as we are not required to maintain any listing of the ETNs.

No Interest Payments from the ETNs: You will not receive any interest payments on the ETNs.
Restrictions on the Minimum Number of ETNs and Date Restrictions for Redemptions: Except in the circumstances described above, you must redeem at least the minimum number of ETNs specified in the applicable prospectus at one time in order to exercise your right to redeem your ETNs on any redemption date. You may only redeem your ETNs on a redemption date if we receive a notice of redemption from you by certain dates and times as set forth in the pricing supplement.

Uncertain Tax Treatment: Significant aspects of the tax treatment of the ETNs are uncertain. You should consult your own tax advisor about your own tax situation.

The ETNs may be sold throughout the day on the exchange through any brokerage account. There are restrictions on the minimum number of ETNs you may redeem directly with the issuer as specified in the applicable prospectus. Commissions may apply and there are tax consequences in the event of sale, redemption or maturity of ETNs. Sales in the secondary market may result in significant losses.
